

Procore Organizes Project Information

Lost emails. Misplaced project documents. If these problems sound familiar, you need Procore. With Procore, project communications are kept in a single, easy-to-search project web site. Procore solves construction project communication headaches.

Construction projects need fast, accurate communications. Waiting for an unanswered Request-for-Information (RFI) or change order can stop a project in its tracks. Losing an email with important details can cause a job to go sideways. Procore gives you one central place to keep all your project information. Emails never get lost, documents can always be located, and information gets to the people who need it.

Procore is web-based, so authorized users can access information from any Internet connection. There's no software to download or install – Procore works right in the web browser. Constant back-ups mean your data won't fall victim to hard disk crashes. Procore's also easy-to-use. If your team can use email, they already know how to use Procore.

Get Procore today and start solving your project communication problems.

1. Everyone Can Use Procore

Procore works with any email system, including MS Outlook, and any device, including laptops and Blackberry.

2. Private Emails

Click to mark any email as private, and other users won't be able to see it.

3. Search

Find who said what, when. Type in a search term and see all messages with that text.

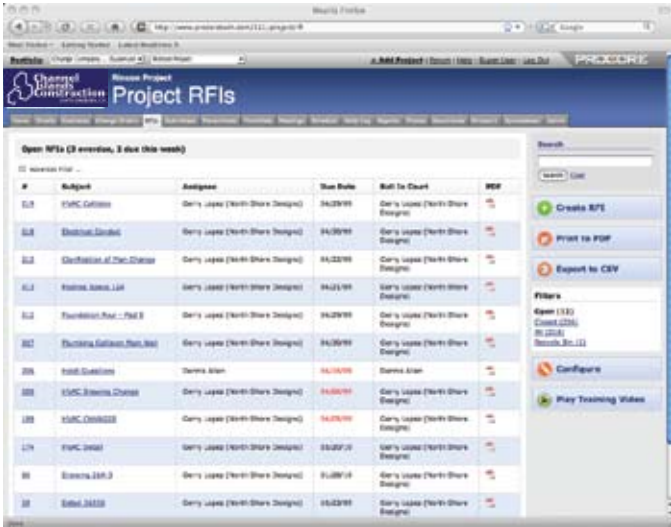

4. Project Email Address

Every project has its own email address. Just cc: the project address to add a communication to Procore's archive.

5. Organize Your Emails

Procore keeps email discussions sorted by topic.

Requests-For-Information (RFIs)

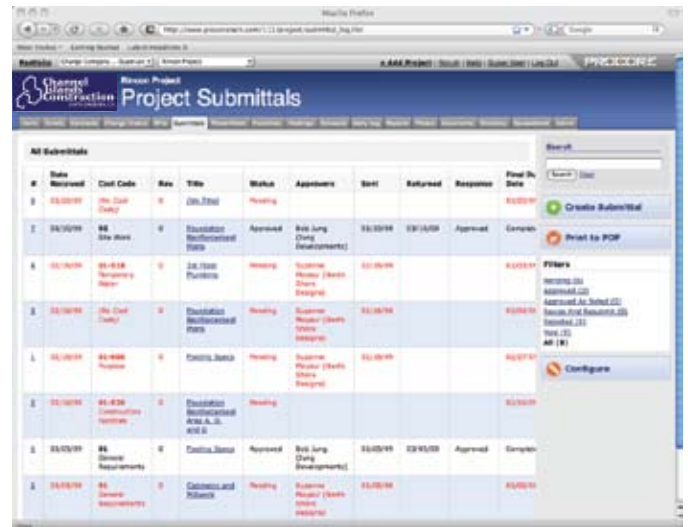

Requests-for-Information (RFIs) can help a project run smoothly and on schedule. Lost or delayed RFIs can cause cost overruns and lost profits.

Procore brings transparency and accountability to the RFI process. Because team members see the progress on each RFI, Procore actually helps improve RFI workflow. With Procore, RFIs get answered faster, and more accurately – and that means projects stay on schedule.

Submittals

Procore organizes key information for every submittal item on a project, all in one place. Email notifications are sent automatically when the status of an item changes, so everyone knows exactly which items need attention.

See who did what on each submittal – when the submittal was created, any discussion on details regarding that submittal, and the progress made towards close-out and approval. With Procore, there’s never a question whether or not a submittal is closed – you’ll know for sure.

PROCORE™ Also Includes:

Project Scheduling & Integration

View the project schedule right in your web browser.

Procore works with the scheduling software you already use - including Microsoft Project and Primavera products. Just click on a task link in Procore to edit your schedule.

Document & Photo Management

Keep project documents online and backed-up. Plans, permits, contracts, even faxes - they're all safe and accessible.

Find any photo file on your computer and click to upload to Procore. Create your own project categories to organize photos.
